

To whom it may concern:

Dear Sirs,

Re: Warehouses H.Essers Logistics Winterslag-Genk, Belgium

I undersigned, Geert De Ketelaere, am pleased to confirm my greatest satisfaction with the Sinus Slide joints manufactured by Hengelhoef Concrete Joints and installed in our Warehouses in Winterslag-Genk, Belgium.

These kinds of joints are an excellent solution for our heavily loaded and intensely trafficked aisle ways.

After several years of intense forklift traffic with small hard polyamide wheels the Sinus Slide joints are still in a perfect state.

The sinusoidal surface from steel and concrete ensures a shock free transfer between the floor slabs due to the continuous support of passing wheels. By neutralising the striking impact of the wheels, forklift drivers experience unprecedented comfort and any risk of damages to vehicle or to the floor slab is significantly reduced.

In comparison with other armoured straight joints or steel angles exposed to the same loads and traffic and in the same circumstances, the Sinus Slide joints are an efficient and sustainable improvement with enhanced profitability of operators and big cost savings in wear and tear of forklift equipment.
